9-11컷 생성 프롬프트 (모델: Seedance 2.5)

Create a 10-second, 16:9 handmade clay stop-motion sequence consisting of exactly three shots: Shots 9, 10, and 11.
Continue naturally after Supi silently discovers the completed pasta structure.

REFERENCES
@Image1: The approved completed pasta structure. Preserve its exact geometry, silhouette, pasta arrangement, cheese connections, and placement.
@Image2: Doorway continuity. Match the characters' established positions, screen direction, wardrobe, lighting, and spatial relationship.
@Image3: Heady's character identity.
@Image4: Supi's character identity.
@Image5: The authoritative apartment layout, floor materials, furniture, and kitchen arrangement.

PACING
Use natural performance timing rather than rigid per-shot timestamps.
Give the structure detail a readable opening beat.
Allow Supi's attention to return from the structure to Heady before she raises her wrist.
Make the final two watch taps distinct and easy to read.
Use clean cuts between the three shots.

CORE CONTINUITY
Supi remains outside the doorway.
Heady remains inside, facing Supi.
The approved structure stands directly on the floor in front of the stove.
It is made from rigid, uncooked golden pasta connected with small pale cream cheese pieces.
Preserve the exact approved structure without redesigning it.
Maintain the established warm midday light.
Do not reveal the cat in these shots.

SHOT 9 - THE CHEESE CONNECTION

Camera:
A locked macro close-up of an existing connection in the lower diagonal X-bracing of the approved structure.

Show the point where a diagonal pasta element meets a horizontal member, joined by a small pale cream cheese piece.
Use shallow depth of field while keeping the connection clearly readable.

Action:
The completed joint remains still.
Let the image reveal how the dry pasta ends are embedded in and held together by the cheese.
Preserve the actual arrangement from @Image1.
No hands enter the frame.
No assembly, construction, melting, stretching, or movement of the structure.
Do not invent additional joints or change the bracing pattern.

SHOT 10 - BACK TO BUSINESS

Camera:
Cut to a locked side-angle medium two-shot at the doorway.
Supi is outside; Heady is inside.
They remain oriented toward one another.
Match the established screen direction and doorway arrangement from @Image2.

Action:
Supi finishes looking past Heady toward the structure.
After a brief absorbed pause, she returns her gaze to Heady’s face.
Her amazement settles into a composed, practical, mildly stern expression.
Heady watches her cautiously.
Supi begins raising her watch-bearing forearm between them, preparing to point out the time.

End this shot during the upward movement of her forearm, allowing a cut on action.
Heady does not nod, bow, or perform his apologetic reaction yet.
No dialogue or broad smile.

SHOT 11 - TWO TAPS ON THE WATCH

Camera:
Cut on the forearm movement to a close-up of Supi’s wristwatch, viewed from Heady’s side.
The watch face and the opposite index finger must both be clearly visible.
Match the arm position and movement from the preceding shot.

Watch continuity:
If a watch is visible in the established references, preserve its design and wrist placement.
Otherwise, use a small round watch with a cream dial and a dark brown strap on Supi’s left wrist.
Maintain the same watch throughout Shots 10 and 11.

Action:
Supi presents the watch toward Heady.
With the index finger of her opposite hand, she taps the watch exactly twice.
Each tap has a clear approach, brief contact, and lift.
After the second tap, the finger stops and the watch remains presented toward Heady for a short hold.

Exactly two taps.
No third tap, repeated loop, pointing sequence, wrist switching, or extra hand.
Do not show Heady’s reaction in this shot.
End on the watch gesture.

STYLE AND CONTINUITY
Match the preceding footage: tactile matte clay, subtle fingerprints, miniature handmade props, restrained stepped character animation, and consistent warm midday daylight.
Preserve character proportions, clothing, hand anatomy, room layout, and the structure’s exact shape.
No glossy CGI surfaces, rubbery deformation, dramatic camera moves, or lighting changes.

AUDIO
Quiet interior room tone.
Two soft, distinct contact sounds synchronized with the two watch taps.
No dialogue, music, ringing phone, new doorbell, captions, subtitles, or watermark.
