컷 생성 프롬프트 (모델: Seedance 2.5)

Create a 10-second, horizontal 16:9 cinematic clay stop-motion sequence consisting of exactly FOUR consecutive shots in the order below. Each shot fills the entire screen. Use clean hard cuts, with no split screens or contact-sheet layouts.

PACING
Let performance and readability determine the cut points. Give more time to Heady waking up in Shot 1 and reacting in Shot 4. Keep Shots 2 and 3 shorter, but long enough to clearly register midday and the missed calls. Approximately 3 / 2 / 2 / 3 seconds is a loose pacing guide only, not a rigid schedule. Complete each essential action before cutting. Time the doorbell sounds to the actions described below, not to fixed timestamps.

REFERENCES
@Image1: Heady's character identity, proportions, face, hair, glasses, clothing, and accessories. Identity reference only; do not reproduce the character-sheet layout.
@Image2: The apartment's spatial layout and furniture placement. The large upper overview is authoritative; lower detail panels provide materials and prop appearance only. Do not reproduce the cutaway walls or reference-sheet layout.
@Image3: The existing kitchen scene with Heady on the left, a cooking pot in front of him, and the orange cat on the right beside a spaghetti jar. Use only for handmade clay texture, practical miniature-set appearance, and character integration. Do not copy its nighttime lighting, cooking action, or character placement.

CORE CONTINUITY
The entire sequence takes place at midday in the same apartment. Replace the references' nighttime exterior with bright daytime city views. Strong natural daylight enters through the existing three black-framed windows. Maintain consistent light direction and exposure across all shots.

Preserve the room layout from @Image2: three windows along the rear wall, writing desk at rear-left, bed at rear-right, kitchen on the left, dining table near the entrance on the right. Do not rearrange or mirror the room, or add windows and furniture.

Heady sits in the dining chair nearest the foreground edge of the table in the master overview, facing toward the window wall. The entrance is to his right.

Maintain his seated position and spatial orientation throughout.

A smartphone lies face-up near his right hand, beside drawing papers and a pencil. Keep these props in fixed positions. Frame all four shots so the completed structure remains offscreen. No visible cat, team leader, or additional characters.

FIXED CHARACTER
Match Heady exactly to @Image1: small three-head-tall lavender clay character, tousled plum-colored sculpted hair with a pencil tucked into it, round ochre glasses, craft-style eyes, and the same outfit and accessories. Preserve handmade fingerprints, slight asymmetry, and sculpting marks. His performance progresses from sleepy confusion to sudden concern.

SHOT 1 — WAKING AT THE TABLE
CAMERA: Locked-off medium shot from a 45-degree side angle at seated eye level. Show Heady's upper body and a limited portion of the dining tabletop. Keep the completed structure outside the frame.

ACTION: Begin with Heady asleep, his head resting on his folded arms. Briefly establish this pose, then sound the offscreen doorbell. In response, he slowly lifts his head and opens his heavy eyelids. Allow the waking movement to finish, leaving him upright but drowsy. His attention shifts toward the bright windows, motivating the next cut. Small, deliberate stop-motion movements; no exaggerated startle.

SHOT 2 — MIDDAY THROUGH THE WINDOWS
CAMERA: Hard cut to a locked-off OVER-THE-SHOULDER shot from behind Heady at seated shoulder height, looking toward the window wall. His plum hair and lavender shoulder remain visible in the foreground. This is an OTS composition, not a first-person POV.

ACTION: Heady looks toward the three existing windows. Bright daytime sky and sunlight passing through the blinds clearly establish that it is already midday. Keep his foreground silhouette small enough for the windows to remain readable. After a brief readable look, he lowers his gaze toward the tabletop, motivating the phone insert.

SHOT 3 — MISSED CALLS
CAMERA: Hard cut to a locked-off overhead close-up, looking straight down at the smartphone on the wooden table. Frame the phone, Heady's right hand, and the

edges of nearby drawing papers.

ACTION: His right index finger taps the dark screen once and withdraws. The screen lights up, revealing multiple missed calls from the same caller. Use simple repeated missed-call icons and clean notification rows; precise lettering will be added in post-production. Briefly hold the illuminated screen so the repeated calls are readable. The phone remains flat and stationary.

SHOT 4 — REALIZATION AND THE SECOND DOORBELL
CAMERA: Hard cut to a locked-off LOW-ANGLE CLOSE-UP of Heady's face, viewed from approximately tabletop height and tilted upward. Show his face, glasses, hair, and a small portion of his shoulders. Make the low angle unmistakable without extreme wide-angle distortion.

ACTION: Begin with Heady looking down at the phone below the frame. His eyes widen as he realizes how many calls he has missed. Allow a short beat for this realization to register. Then the same doorbell rings again, triggering a sharp head turn toward the entrance on his right, offscreen toward screen-left in this frontal composition. His torso stays seated. End by briefly holding his concerned gaze toward the door. Do not stand up or open the door.

AUDIO
Quiet apartment room tone throughout. Exactly two matching offscreen doorbell rings from the entrance: the first wakes Heady in Shot 1; the second interrupts his realization and triggers his head turn in Shot 4. Subtle puppet movement, clothing rustle, and a gentle fingertip tap on the phone. No dialogue, narration, or music.

STYLE AND CONSTRAINTS
Photographed handmade clay puppets in a practical miniature apartment. Tactile matte plasticine, fingerprints, sculpted hair, tool marks, and small handmade imperfections. Restrained stepped stop-motion acting with stable lighting.

Maintain the same character model, furniture layout, prop positions, daylight direction, and spatial continuity across all four shots. All cameras remain locked within their shots. Exactly four shots, with no extra cuts. No camera orbit, dolly, zoom, handheld shake, dissolves, morphing, floating objects, extra fingers, facial redesign, glossy CGI appearance, lighting flicker, subtitles, logos, or watermarks.

Prioritize clear acting, motivated cuts, and readable visual information within the total 10-second duration. Never cut halfway through an essential action merely to

follow the approximate shot durations.
